NOTE: The 2000 and 2010 housing unit counts were revised by the Census Bureau under the CQR Program after the initial release of the Census figures; however, these revisions were not included in other enumerated data (including this table). See notes and corrections.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error, which may be relatively large for smaller geographies and population sub-groups. In addition to sampling variability, the ACS estimates are subject to nonsampling error.
